# ASEPTIC-THERMO INDICATORS

The whole success of autoclave sterilization for fabrics is based on the use of steam as the sterilizing agent. The correct correlation of steam, heat and time in the autoclave chamber is necessary for complete sterilization.

Aseptic-Thermo Indicator is the only sterilizer control manufactured which also requires the correct correlation of these three elements for reaction. You will enjoy using the handy Aseptic-Thermo Indicators which so completely and satisfactorily indicate sterilization of fabric and rubber materials. A-T-I's are manufactured to meet the rigid specifications of quality of the United States Veterans' Administration.

# The Purest and Safest Corn Syrups for INFANT FEEDING

These pure corn syrups serve admirably as a carbohydrate to be added to milk for the bottle feeding of infants, because they are so easily digested and do not irritate the intestinal tract.

Many leading pediatricians prescribe and recommend the use of "CROWN BRAND" or "LILY WHITE" CORN SYRUPS with confidence in their purity and in the satisfactory results which they assure.

A study of the use of and advantages of these pure corn syrups in an item of diet in prenatal care will amply reward practitioners in this important work.

## EDWARDSBURG "CROWN BRAND" and "LILY WHITE" CORN SYRUPS

Manufactured by  
**The CANADA STARCH COMPANY, Limited**  
MONTREAL and TORONTO

### FOR THE MEDICAL PROFESSION ONLY

A convenient pocket calculator, with varied infant feeding formulae employing these two famous corn syrups . . . a scientific treatise in book form for infant feeding . . . and prescription pads, are available on request, also an interesting booklet on prenatal care. Kindly clip the coupon and this useful material will be mailed to you immediately.

# DISCARD dulled edges ... *not* scissors

A unique and practical procedure that is *time-saving* . . . *labor-saving* . . . *money saving*. An instrument preserving procedure that exclusively serves to identify **BARD-PARKER Renewable Edge SCISSORS**.

## THESE BUDGET-EATING FACTORS ARE ELIMINATED

Accumulation of discarded scissors to be reground.	Expense of postage, wrapping materials and time utilized in regrounding routine.	Unnecessary reserve replacement stock.	Loss of original cutting efficiency due to regrounding.	Cost of sharpening over edge replacement.	Permanent discard due to constant sharpening wear.

● The perpetual sharpness and general serviceability of a single pair of B-P Renewable Edge Scissors may be constantly maintained by the instant replacement of dulled edges with new keen edges. Time consumed?—21 seconds . . . at virtually half the normal cost of regrounding.

B-P Renewable Edge Scissors mark a definite stride in surgical scissors evolution. They provide outstanding advantages over conventional type

scissors that are worthy of investigation.

Available in straight operating, straight and offset dissecting patterns, from \$3.35 to \$4.85 a pair. Scissor edges all sizes (3 pairs to package) per package 60¢.

*D & G*  
CLAUSTRO-THERMAL

*Catgut*

UNIMPAIRED BY REPEATED BOILING OR AUTOCLAVING

**C**LAUSTRO-THERMAL catgut is especially prepared for the many surgeons and surgical supervisors who prefer boiling or autoclaving to other methods of aseptizing the outer surface of suture tubes.

It possesses all the qualities essential to ease of handling and proper function and, in addition, offers the extra safety factor of Claustro-Thermal sterilization — an exclusive Davis & Geck process.

Under this method, heat — at tempera-

tures lethal to the most resistant organisms and spores — is applied **AFTER** the sutures are hermetically sealed in glass tubes and are thus protected.

The stability of Claustro-Thermal catgut and its storing fluid is such that the suture's physical properties are in no way impaired by repeated boiling or autoclaving. Its flexibility is controllable and can be quickly and easily regulated to meet individual preferences or specific requirements.

# CRESCENT

## SURGICAL BLADES

Were **EVOLVED** Through  
40 Years of Experience and Research

Crescent Surgical Blades fit the handles now in use in your institution.

- **MIKRO-KEEN:** Ground on a longer bevel on heavier steel, Crescent Surgical Blades provide a keenness of edge never before attained.
- **RIGIPOISED:** The  $\frac{1}{2}$  more steel evenly distributed over the whole blade makes it more rigid, non-flexing and better balanced.
- **SELECTED:** Only perfect blades are passed for surgical use, after meeting the most rigid specifications conceivable.
- **ECONOMICAL:** Even the first cost is less, but the true economy of Crescent blades lies in their longer useful life. You cannot buy a better blade.

### Note these prices

Per Gross .....	\$14.25 gr.
1 to 5 Gross .....	13.40 gr.
10 Gross or More .....	12.67 gr.

- **APPROVED:** Crescent blades are approved by the American College of Surgeons.
- **AVAILABLE:** All good Canadian Surgical Supply houses will now supply your needs from stock.
- **SAMPLES** without charge are available to you for the asking.

Buy a gross of Crescent Surgical Blades from your dealer today . . . or write us for samples.
